

KYMANI JARRETT

✉ jarretkr@mail.uc.edu [in LinkedIn](#) [GitHub](#) [Portfolio](#)

Education

University of Cincinnati

Expected Graduation: May 2028

B.Sc in Information Technology | B.Sc in Cybersecurity

Cincinnati, Ohio

- **Academia:** 3x Dean's List Recipient | **GPA: 3.7/4.0**
- **Leadership:** Resident Assistant (Resident Ed & Dev), Corporate Outreach Chair (ColorStack @ UC), Secretary (Bearcat Buddies Advisory Council), Programming Chair (United Black Student Association)

Work Experience

Cloud Data Engineer Intern

May – August 2026

The J.M. Smucker Company

Orrville, Ohio

- Migrated a **production enterprise CloudFormation repository**, rebuilding the full **CI/CD pipeline** as **GitHub Actions** workflows and authoring a **CloudFormation template** that provisioned an **OIDC identity provider** and **IAM roles** for **keyless AWS authentication**
- Owned an **end-to-end data field integration** across every layer of a **partner-driven ingestion pipeline**, rewriting a **Glue ETL job** after extensive testing surfaced **CSV edge cases**, eliminating silent data corruption from malformed upstream files
- Modernized **Lambda functions** across an enterprise notification service from an **end-of-life runtime**, defining them as **prebuilt CloudFormation resources** and centralizing **runtime version control** through a single **GitHub Actions** variable

Software Engineer Intern

August 2025 – May 2026

UC IT Solutions Center

Cincinnati, Ohio

- Built a **multi-service referral platform** for a Fortune 500 client with **2,000+ users**, rendering service-specific **React** forms with per-service **Zod** validation, document uploads, and a six-stage referral lifecycle from draft to processed, secured by **role-based permissions middleware** governing visibility, endpoint access, and actions
- Engineered the referral processing workflow across every layer of a **Clean Architecture** stack, from **Liquibase** migrations and **Sequelize** models to use cases, repositories, **Express** controllers, and **TanStack** service hooks, creating student, service, and enrollment records in a single **database transaction** with upserts to prevent duplicates
- Reduced data processing time by **30%** by moving computation server-side through optimized **Sequelize queries**, typed projections, and **PostgreSQL views**, and **accelerated release cycles by 20%** through bi-weekly stakeholder demos and feedback loops

Software Development Intern

January – May 2025

Toyz Electronics

Cincinnati, Ohio

- Owned the **student directory** for **DahVarsity AI**, a gamified STEAM learning platform with **5,000+ registered users**, building a three-level **React** drill-down from schools to student rosters to individual student profiles
- Engineered a **player card carousel** modeled from **React** templates, rendering in-game profile data served by the game's **backend API** through **reusable, prop-driven components** with **responsive layouts** across mobile and desktop
- Turned feature concepts from the CEO into shipped UI, working in **weekly Agile sprints** alongside the CTO, PM, and **four partner universities**, joining **integration testing** and demos between the web platform and the **Unreal Engine** game

Projects

Clausify | [Source Code](#)

Spring Boot | Angular | RAG

- Building an **AI-powered contract analysis platform** enabling freelancers and small businesses to upload contracts and receive **instant clause-level risk scoring** against industry-standard benchmarks
- Engineered a **RAG pipeline** with **LangChain** and the **Groq API** that chunks contracts into clauses, builds context-aware prompts, and returns **structured JSON risk assessments** per clause
- Architected a layered **Spring Boot** backend with **Spring Data JPA** on **MySQL**, an **Angular** and **Tailwind** frontend, and a privacy-first design that stores extracted text rather than uploaded contracts

Vigil | [Website](#) | [Source Code](#)

React | FastAPI | AWS

- Built a **production-grade ETL observability platform** monitoring **AWS Glue** pipeline health in real time – surfacing job run history, execution durations, and failure states across a **live dashboard** with a **statistical anomaly detection engine** that triggers **automated SendGrid alerts** before failures cascade downstream
- Engineered a **multi-user security foundation** featuring **role-based access control**, enforced server-side with **principle of least privilege**, an **append-only audit log** tracking all user actions with IP and timestamp, **authentication event monitoring**, and a **security posture dashboard** surfacing failed login trends, active sessions, and permission changes in real time
- Architected a **RESTful FastAPI** backend with **JWT authentication**, **PostgreSQL** persistence via Supabase managed through **Alembic migrations**, and **boto3 AWS Glue API** integration – deployed across **Vercel** and **Render** with **RLS** on all tables

Technical Skills

Languages: Java, Python, TypeScript, JavaScript, SQL, C#

Frameworks & Libraries: Spring Boot, Spring Data JPA, React, Angular, Node.js, Express, FastAPI, ASP.NET MVC, Tailwind CSS

Cloud & Data: AWS (Glue, S3, Athena, Lambda, Step Functions, CloudFormation), Azure, Apache Spark, PostgreSQL, MySQL

AI & Developer Tools: LangChain, RAG, Git, GitHub Actions (CI/CD), Docker
